

# The Deliberative Practice of Vision Mobility 2050:

*Vision-making for sustainable  
mobility in the region of Munich?*

**mobil.TUM Conference, 7. June 2016, mobil.LAB Session on “Sustainable Mobility in the  
Metropolitan Region of Munich”**

Sven Kesselring ([sven.kesselring@hfwu.de](mailto:sven.kesselring@hfwu.de)) , Chelsea Tschoerner ([chelsea.tschoerner@hfwu.de](mailto:chelsea.tschoerner@hfwu.de)),

# VISION MOBILITY 2050 IN THE MUNICH AREA

## MANAGING DATA IN NEW WAYS

## DEVELOPING STRATEGIES FOR THE DEVELOPMENT AND MAINTENANCE OF INFRASTRUCTURE

INZELL INITIATIVE

## PROMOTING VEHICLE INNOVATION

- >> Advance the diversification of drive forms in passenger and goods traffic.
- >> Facilitate, foster, allow, evaluate experimental solutions.

## ESTABLISHING E-MOBILITY IN THE MUNICH AREA

- >> Develop charging infrastructure systematically

- >> Foster multimodality

- >> Rigorously strengthen, tangentially and in regional public transport and multimodally interlink developing job centers (also motorized personal transport)

## ACTIVELY DEVELOPING AND STRUCTURALLY HARMONIZING TRAFFIC OFFERS

- >> Further local mobility, strengthen non-motorized traffic in fragmented urban structures and in the rural areas

## SECURING LOCAL QUALITIES, SMALL SPATIAL STRUCTURES ON SITE

- >> Secure basic functions of existence on site, strengthen local qualities, enable short routes and good connections to public transport

## FOSTERING ACCEPTANCE

- >> Open planning processes and integration accompanying the process

## STRENGTHENING REGIONAL COOPERATIONS IN TRAFFIC AND LAND USE PLANNING

- >> Better integration of carrier and infra-agencies
- >> Integrational application of bicycle traffic into traffic management

## ORGANIZING LOCATION DEVELOPMENT AT A REGIONAL LEVEL

- >> Bundle provision structures in compact interventions, organize dispersion post-carbon non-motorized

## BETTER UNDERSTANDING AND SPATIALLY DELIMITING THE FUNCTIONAL REGION

- >> Analyze spatiotemporal offers and traffic risks according to usability metrics
- >> Show the region's functional interdependencies between living, work, free time, and mobility

## UNDERSTANDING THE USER

- >> Define sales pitch across the range of carriers, differentiate target group specifically, individualize, rationalize, and emotionally

- >> Gather and share data on the expectations of the customers

- >> Publicly open "roundtables" with carriers and complementary participants
- >> Develop regional financing and balancing mechanisms

## DEVELOPING TRAFFIC MANAGEMENT MEASURES

- >> Intensify traffic management measures, strengthen cooperative traffic systems

## SHAPING PLANNING AND ORGANIZATION MODELS

- >> Initiate regional development planning for the functional (metropolitan) region
- >> Strengthen planning, construction, and operating of all the regional public transport

## DEVELOPING FINANCING STRATEGIES

- >> Compile a mixed strategy for financing construction, maintenance, and operating traffic infrastructure
- >> Evaluate the effect of measures regarding the cost of mobility

## DEVELOPING TRAFFIC MANAGEMENT MEASURES

- >> Intermodal information platform and mobility hubs
- >> Continuous communication and interconnectiveness of traffic and means of transport

## THE USERS' EXPECTATIONS CHANGE

- >> The projected demographic increase leads to an increased demand for transport.
- >> The population becomes older and more international
- >> The service accessibility of the different user groups becomes increasingly differentiated.

## PLANNING AND ORGANIZATION

## STRUCTURES

## MOBILITY CONCEPTS

LEGEND:

- Core
- Support
- Peripheral
- Edge
- Transition
- Buffer

# The Inzell Initiative

Founded in 1995 between Former Lord Mayor and BMW

***“Solving traffic problems together”***

Inzell as platform for deliberative policymaking in Munich

- A “collaborative stakeholder dialogue” (Baumann & White 2013)

Influence on policymaking

- Policy prepared and prestructured in Inzell
- New ‘culture of policymaking’

# Vision Mobility 2050

***Time frame:*** 2012-2014

***Goal:*** Guidelines and action plan to develop mobility in Munich

***Method:*** Three working groups to develop vision

1. Accessibility planning
2. User expectations, how to approach customers
3. Technical instruments, infrastructure and services

***Outcome:*** A concept for sustainable mobility in Munich

- To be reworked and redefined over time

# Key issue and question of paper

Technocratic approach to planning increasingly placed in question as an effective means to solve modern-day, complex problems (Fischer 2003, Dryzek 1990)

Shift in planning methodologies – towards more collaborative and participative policymaking?

*Does the vision planning of the initiative transcend the technocratic planning paradigm to achieve a broader understanding of transport as mobility?*

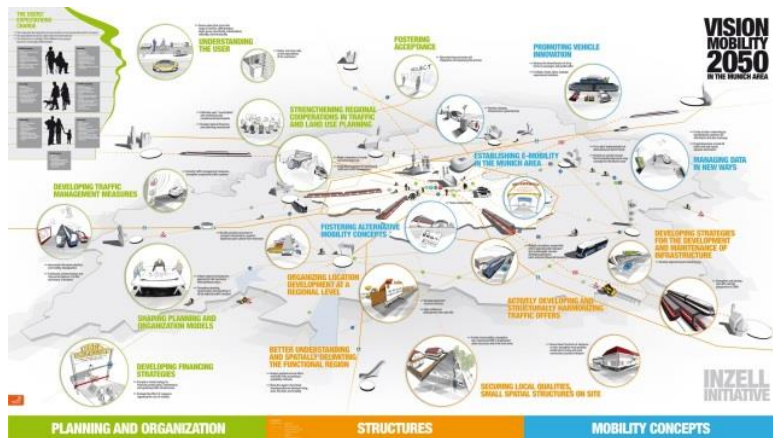

# Methodological approach

*Material for analysis:* visualization of the collective vision

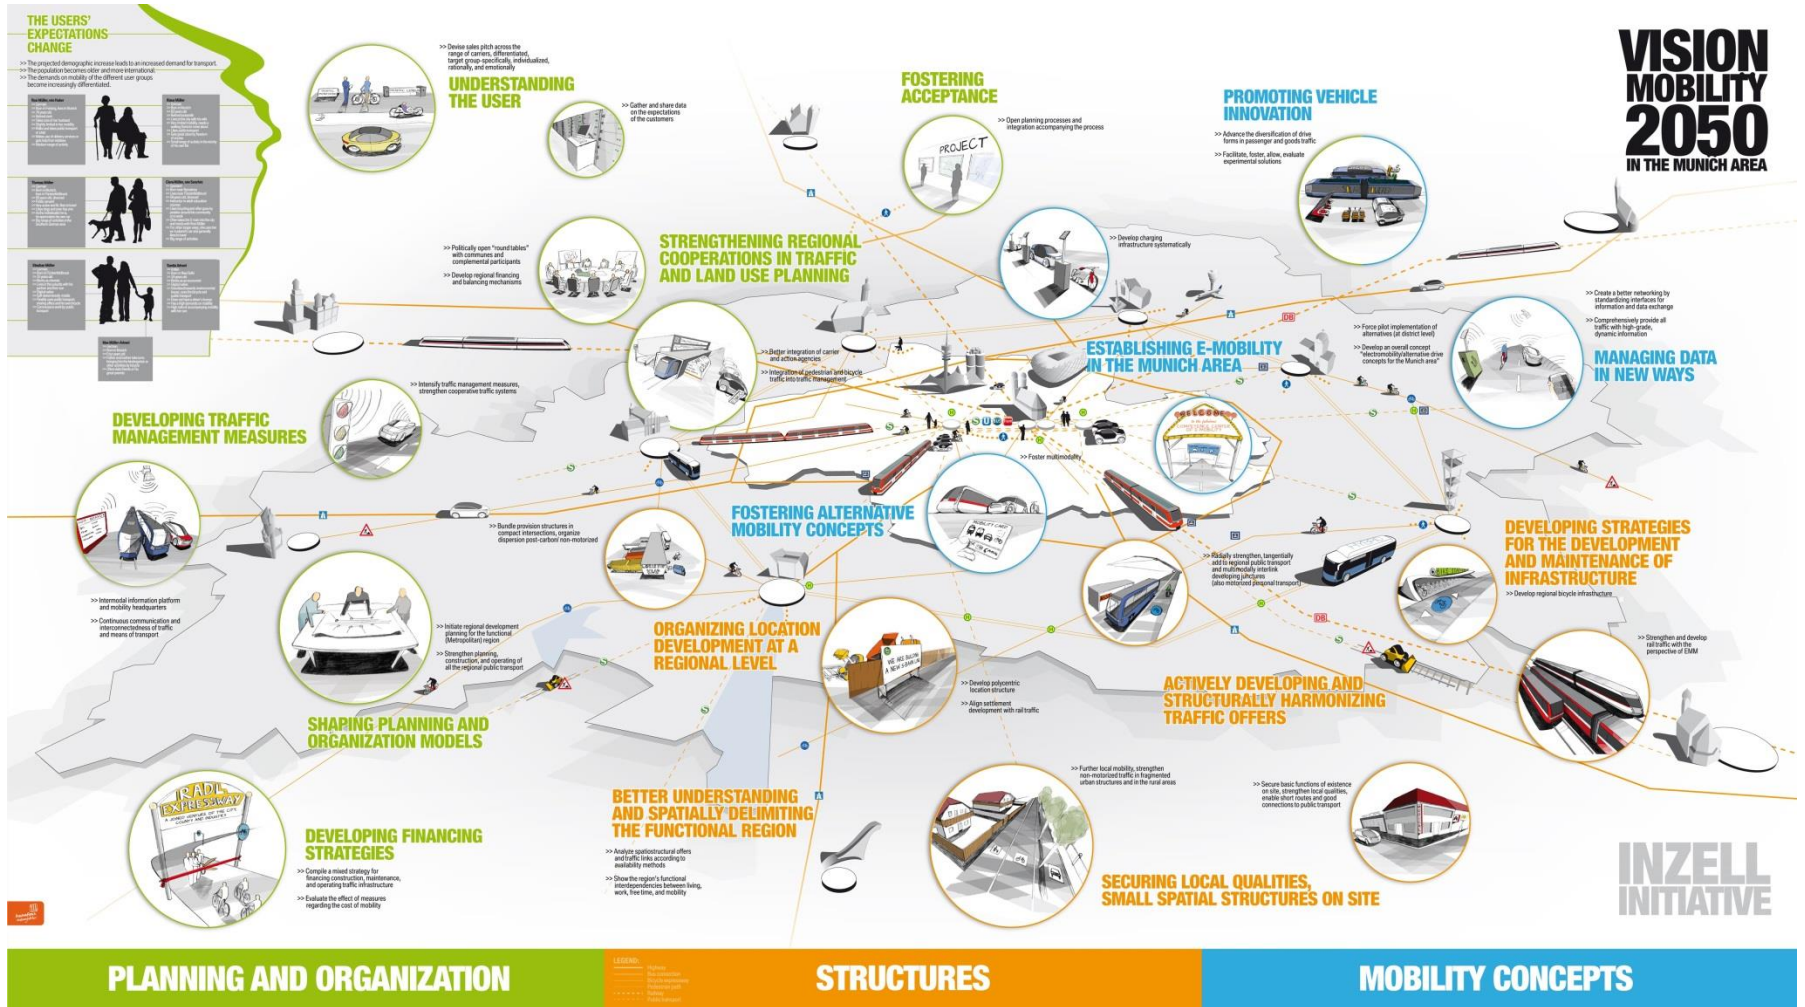

*Contextual material:* interviews, policy document, fieldwork

Analysis of the vision-making process as a 'discursive practice' (Hajer 1995)

Qualitative methods of analysis, focus on discursive dimension of social meaning (Yanow & Schwartz-Shea 2014)

PLANNING AND ORGANIZATION

STRUCTURES

MOBILITY CONCEPTS

# Planning and organization

>> Devise sales pitch across the range of carriers, differentiated, target group-specifically, individualized, rationally, and emotionally

## UNDERSTANDING THE USER

## STRENGTHENING REGIONAL COOPERATIONS IN TRAFFIC AND LAND USE PLANNING

## DEVELOPING TRAFFIC MANAGEMENT MEASURES

>> Bundle provision structures in construction, and operating of all the regional public transport

## SHAPING PLANNING AND ORGANIZATION MODELS

## DEVELOPING FINANCING STRATEGIES

## FOSTERING ACCEPTANCE

DEV  
STF  
>> Compile a financing and open  
>> Evaluate regarding

>> Open planning processes and integration accompanying the process

# Structures

**ORGANIZING LOCATION  
DEVELOPMENT AT A  
REGIONAL LEVEL**

**BETTER UNDERSTANDING  
AND SPATIALLY DELIMITING  
THE FUNCTIONAL REGION**

>> Analyze spatiostructural offers  
and traffic links according to  
availability methods

**SECURING LOCAL QUALITIES,  
SMALL SPATIAL STRUCTURES ON SITE**

**ACTIVELY DEVELOPING AND  
STRUCTURALLY HARMONIZING  
TRAFFIC OFFERS**

## PROMOTING VEHICLE INNOVATION

- >> Advance the diversification of drive forms in passenger and goods traffic
- >> Facilitate, foster, allow, evaluate experimental solutions

ELY DEVELOPING AND  
information and data exchange

- >> Comprehensively provide all traffic with high-grade, dynamic information

INITIATIVE

# Vision Mobility 2050 in Munich

*Goal:* to create new governance frameworks to enable and allow for the testing of new systems of travel and of information

- to enable new market-driven incentives for mobility

Vision-making reflects **re-strengthening** of technocratic visions for mobility

# Findings

A focus on operationalizing governance processes and everyday mobility deters from the bigger issue central to sustainability: the ***collective deliberation and discussion on what system of mobility we, as a society, want in the future***

*Value choices—about the kind of society in which we want to live, about the kind of world we want to leave to posterity—lie at the heart of governance for sustainable development. At base, it is not a technical project, although technical expertise is essential, but a political project. For, while the concept indicates issues that should be of concern, its practical bearing cannot be established independent of the concrete life circumstances of a particular society and the needs, interests, values and aspirations of its members.*

*(Meadowcroft 2007, 302)*
